

# Algebra 2

## Ch. 6 Handout 6.7

### Permutations and Combinations

**n Factorial**

For any positive integer  $n$

$$n! = n(n-1)(n-2) \cdot \dots \cdot 3 \cdot 2 \cdot 1$$

**n Factorial**

For any positive integer  $n$ ,  $n! = n(n-1)(n-2) \cdot \dots \cdot 3 \cdot 2 \cdot 1$

$$0! = 1$$

$$1! = 1$$

Factorial --  $2! = 2 \cdot 1 = \mathbf{2}$

$$3! = 3 \cdot 2 \cdot 1 = 6$$

$$4! = 4 \cdot 3 \cdot 2 \cdot 1 = 24$$

$$5! = 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1 = 120$$

$$6! = 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1 = 720$$

$$7! = 7 \cdot 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1 = 5040$$

$$8! = 8 \cdot 7 \cdot 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1 = 40320$$

# Simplify:

$$\begin{aligned} 1) \quad 9! &= 362,880 \\ &= 9 \cdot 8 \cdot 7 \cdot 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1 \end{aligned}$$

$$\begin{aligned} 2) \quad \frac{14!}{10!4!} &= 1001 \\ &= \frac{\cancel{14} \cdot \cancel{13} \cdot \cancel{12} \cdot \cancel{11} \cdot \cancel{10}!}{\cancel{10}! \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot 1} \\ &= \frac{7 \cdot 13 \cdot 11}{1} \\ &= 1001 \end{aligned}$$

# Permutations

1

is an arrangement of items in a particular order

2

order matters

3

details matter/position matters

# Combinations

1

a selection in which order does not matter

2

doesn't change the look

3

order does not matter -- you can mix it up and looks the same

4

1. State whether each one is Combination or Permutation.

a) Picking a team of 3 people from a group of 10.

**Combination**

order does not  
matter

b) Picking a president, vice-president, and a water boy from a group of 12

**Permutation**

order matters

c) 3 desserts from a menu of 10.

**Combination**

order does not  
matter

d) Listing your 3 favorite desserts, in order, from a menu of 10 items.

**Permutation**

order matters

**Number of Permutations**

The number of permutations of  $n$  items of a set arranged  $r$  items at a time is  ${}_nP_r$ .

$${}_nP_r = \frac{n!}{(n-r)!} \quad \text{for } 0 \leq r \leq n$$

$$\text{Ex: } {}_8P_2 = \frac{8!}{(8-2)!} = \frac{8!}{6!} = \frac{8 \cdot 7 \cdot \cancel{6!}}{\cancel{6!}}$$

$$\boxed{{}_8P_2 = 56 \text{ ways}}$$

## Number of Combinations

The number of combinations of  $n$  items of a set chosen  $r$  items at a time is  ${}_nC_r$ .

$${}_nC_r = \frac{n!}{r!(n-r)!} \text{ for } 0 \leq r \leq n$$

Ex:  ${}_7C_3 = \frac{7!}{3!(7-3)!} = \frac{7!}{3!4!} = \frac{7 \cdot \cancel{6} \cdot \cancel{5} \cdot \cancel{4}!}{3 \cdot \cancel{2} \cdot 1 \cdot \cancel{4}!}$

${}_7C_3 = 35 \text{ ways}$

In how many ways can 8 people line up from left to right for a group photo?

$$8! = 8 \cdot 7 \cdot 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1$$

$$= \boxed{40,320 \text{ ways}}$$

How many 4-letter codes can be made if no letter can be used twice?

Permutation or Combination?

Permutation

$$\begin{aligned} N P_R &= 26 P_4 = \frac{26!}{(26-4)!} = \frac{26!}{22!} \\ &= \frac{26 \cdot 25 \cdot 24 \cdot 23 \cdot \cancel{22!}}{\cancel{22!}} \\ &= \boxed{358,800 \text{ ways}} \end{aligned}$$

A disc jockey wants to select 5 songs from a new CD that contains 12 songs. How many 5-song selections are possible?

Permutation or Combination?

Combination

$$\begin{aligned}
 {}^N C_R &= {}^{12} C_5 = \frac{12!}{5!(12-5)!} \\
 &= \frac{12!}{5! 7!} = \frac{\cancel{12} \cdot \cancel{11} \cdot \overset{2}{\cancel{10}} \cdot \overset{4}{\cancel{9}} \cdot \cancel{8} \cdot \cancel{7}!}{\cancel{5} \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot \cancel{1} \cdot 7!} \\
 &= 11 \cdot 2 \cdot 9 \cdot 4 \\
 &= 792 \text{ ways}
 \end{aligned}$$

Of the 12 songs, in how many ways can the disc jockey select seven songs? Twelve songs?

Permutation or Combination?

Combination

$$\begin{aligned}
 {}_{12}C_7 &= \frac{12!}{7!(12-7)!} = \frac{12!}{7!5!} = \frac{\cancel{12} \cdot \cancel{11} \cdot \cancel{10} \cdot \cancel{9} \cdot \cancel{8} \cdot \cancel{7}!}{\cancel{7}! \cdot \cancel{5} \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot 1} \\
 &= 11 \cdot 9 \cdot 8 \\
 &= 792 \text{ ways}
 \end{aligned}$$

---

$${}_{12}C_{12} = \frac{12!}{12!(12-12)!} = \frac{\cancel{12}!}{\cancel{12}! \cdot 1!} = \frac{1}{1} = \boxed{1 \text{ way}}$$

*A combination* is when things are selected, and a *permutation* is when things are arranged.

**Review**

5. In how many ways can you arrange six trophies on a shelf?

$$6! = 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1 = \boxed{720 \text{ ways}}$$

6. How many 3-letter codes can be made if no letter can be used twice?

$$\begin{aligned} {}_{26}P_3 &= \frac{26!}{(26-3)!} = \frac{26!}{23!} = \frac{26 \cdot 25 \cdot 24 \cdot \cancel{23!}}{\cancel{23!}} \\ &= 15,600 \text{ ways} \end{aligned}$$

## Permutation or Combination?

## Permutation

The ski club with ten members is to choose three officers captain, co-captain, and secretary, how many ways can those offices be filled?

$${}_{10}P_3 = \frac{10!}{(10-3)!} = \frac{10!}{7!} = \frac{10 \cdot 9 \cdot 8 \cdot \cancel{7!}}{\cancel{7!}} = \boxed{720 \text{ ways}}$$

## Permutation or Combination?

There are 12 standbys who hope to get on your flight to Hawaii, but only 6 seats are available on the plane. How many different ways can the 6 people be selected?

$$\begin{aligned}
 {}_{12}C_6 &= \frac{12!}{6!(12-6)!} = \frac{12!}{6!6!} \\
 &= \frac{\cancel{12} \cdot \cancel{11} \cdot \cancel{10}^2 \cdot \cancel{9}^3 \cdot \cancel{8}^2 \cdot \cancel{7} \cdot \cancel{6}!}{\cancel{6}! \cdot \cancel{6} \cdot \cancel{5} \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot 1} \\
 &= 11 \cdot 2 \cdot 3 \cdot 2 \cdot 7 \\
 &= \boxed{924 \text{ ways}}
 \end{aligned}$$
