Ch. 9 Handout 9.2 Reflections

Reflection (or flip)

-- is an transformation in which a figure and its image have opposite orientations. Thus, a reflected image in a mirror appears "backwards".

Examples of Reflection

Reflections
Reflections

If point Q $(-1, 2)$ is reflected across line $x = 1$, what are the coordinates of its reflection image? What are the coordinates of the image of Q if the reflection line is $y = -1$?

Describe this transformation

● CLICK

ANSWER

Reflect ABC across the y-axis

Reflect ABC across the x-axis

What do you notice?

Reflect ABC across the line $y = x$

HINT ●

$$(x,y) \rightarrow (y,x)$$

$A(3,1)$ $A'(\underline{1}, \underline{3})$

$B(7,3)$ $B'(\underline{3}, \underline{7})$

$C(6,5)$ $C'(\underline{5}, \underline{6})$

What do you notice?

Reflection summary

... across the y-axis

$$(x, y) \longrightarrow (-x, y)$$

● CLICK

... across the x-axis

$$(x, y) \longrightarrow (x, -y)$$

● CLICK

... across the line $y = x$

$$(x, y) \longrightarrow (y, x)$$

● CLICK

Common Rules for Reflection across the x-axis, y-axis, origin, and line $y = x$

1. y-axis -- "change x, keep y" $(x, y) \rightarrow (-x, y)$
2. x-axis -- "keep x, change y" $(x, y) \rightarrow (x, -y)$
3. across the line $y = x$ -- swap x and y $(x, y) \rightarrow (y, x)$
4. through origin -- "change x, change y" $(x, y) \rightarrow (-x, -y)$

Match the line of reflection

$$(x, y) \rightarrow (x, -y)$$

Reflection across the x-axis

$$C(7, 3) \longrightarrow C'(7, -3)$$

$$B(-3, 1) \longrightarrow B'(-3, -1)$$

$$(x, y) \rightarrow (-x, y)$$

Reflection across the y-axis

$$E(-5, 6) \longrightarrow E'(5, 6)$$

$$(x, y) \rightarrow (y, x)$$

Reflection across the line $y=x$

$$D(-8, -3) \longrightarrow D'(-3, -8)$$

$$A(3, 1) \longrightarrow A'(1, 3)$$

Solution

Reflection across the x-axis

$$B(-3,1) \longrightarrow B'(-3,-1)$$

$$C(7,3) \longrightarrow C'(7,-3)$$

Reflection across the y-axis

$$E(-5,6) \longrightarrow E'(5,6)$$

Reflection across the line $y=x$

$$A(3,1) \longrightarrow A'(1,3)$$

$$D(-8,-3) \longrightarrow D'(-3,-8)$$

$\triangle XYZ$ has vertices $X(-2,3)$, $Y(1,1)$, and $Z(2,4)$. Draw $\triangle XYZ$ and its reflection image across the x -axis.

$\triangle XYZ$ has vertices $X(-2,3)$, $Y(1,1)$, and $Z(2,4)$. Draw $\triangle XYZ$ and its reflection image across the y -axis.

$\triangle XYZ$ has vertices $X(-2,3)$, $Y(1,1)$, and $Z(2,4)$. Draw $\triangle XYZ$ and its reflection image across the line $y = x$.

$\triangle XYZ$ has vertices $X(0, 3)$, $Y(2, 0)$, and $Z(4, 2)$. Draw $\triangle XYZ$ and its reflection image in the line $x = 4$.
